Paper Evidence Checklist

Tick each box before handover to Shreyas (target: end of 10 Nov 2026)

Section III-A / IV-A: Hardware

[ ] Bench photo + wiring diagram + serial boot log
[ ] camera_tests.csv with at least 10 rows
[ ] pan_tilt_tests.csv with at least 10 rows
[ ] Written note of problems and fixes (brownout, jitter, focus)

Section V: Datasets and protocol

[ ] DATA_SOURCES.txt with URL, licence, download date for every dataset
[ ] Class list and counts per split (table)
[ ] Own-data collection summary: dates, number of plants, weather, camera, who verified labels (role only)
[ ] Class-name mapping between PlantVillage and PlantDoc
[ ] Statement of how plant-level splitting was done and checked

Section IV-B: Stage 1 detector

[ ] Training details: images, negatives, epochs, image size, versions
[ ] Precision, recall, mAP50, mAP50-95 on a held-out test split
[ ] Acceptance test table (person, one plant, plant row, pot without plant)
[ ] PR curve + 4-6 example detections including failures

Section IV-C: Stage 2 classifier

[ ] Training details: base model, augmentation, epochs, optimiser, seeds
[ ] Accuracy and macro-F1, mean +/- std over 3 seeds, in-domain
[ ] Same on PlantDoc (cross-domain) and on own ESP32-CAM images
[ ] Binary healthy-vs-diseased recall
[ ] Confusion matrix and one paragraph of error analysis
[ ] At least one ablation (e.g. public only vs public + own data)

Section VI: Speed

[ ] Camera snapshot time (median, p95)
[ ] Classifier and detector inference time with hardware named

Section II: Literature

[ ] literature_table.csv with 15-20 rows, every DOI/URL opened and checked
[ ] Each row's gap vs our work written in one sentence

Honesty and anonymity

[ ] No result in any file was typed from memory or guessed
[ ] Every figure is free of names, college logos, farm names and faces
[ ] Anything not finished is listed here as 'in progress' so the paper can say so honestly

What if you run short of time?

Situation	What we do in the paper
No own field images by 10 Nov	Report PlantVillage + PlantDoc only; describe own-data collection as ongoing; add results at camera-ready (15 Jan)
Detector not trained	Report the classifier only; describe detector as in progress with the training plan
Only 1 seed possible	Report a single run and say so; do not call it mean +/- std

Situation	What we do in the paper
Cross-domain accuracy is low	Report it exactly. This is a finding, not a failure
